EDUCATION

Vellore Institute of Technology — *Bhopal, IND*
Integrated MTech - Computer Science specialization in AI and ML, 8.88/10 GPA — *08/2020 – 05/2025*

Alpine Public School — *Bangalore, IND*
Science with Computer Science, 90% Higher Secondary, 94% Matriculation — *04/2017 – 05/2020*

SKILLS

Languages: Python, SQL,R, Power Bi
Technologies: ML, Big data,DL, NLP, TensorFlow, Keras, NoSQL, SQL, Data Science, Data analyst, Data Engineering, Sklearn, DSA, web scraping, retrieval augmented generation (RAG) , GEN AI, LLM, Transformer.
Others: Data Structures and Algorithms, Object-Oriented Language, Scalability, Stakeholder Management, User-Centric Design

Professional Experience

Volvo India– Automation engineer (Full time) — *07/2025*

Worked as an Automation Engineer supporting development and quality engineering efforts in a global automotive technology team. Responsibilities included automation development, framework design, test execution, and cross-functional collaboration to deliver high-quality software and verification solutions.

-Designed, developed, and maintained **automation frameworks and test scripts** using industry-standard tools and scripting languages (e.g., Python, Robot Framework, or similar).

Volvo India– AI Intern (Completed) — *04/2025*

Python, Rapid Fuzz, Azure, RAG, LLMs, Azure APIs, Folium, Streamlit

During my internship at Volvo, I worked on the following AI-driven projects:

-**Contract Classification:** Engineered a classification system leveraging NLP techniques and Rapid Fuzz and Jaccard's similarity, increasing contract classification accuracy by 80% (Working on increasing it) and streamlining template recognition processes.

-**Geomapping of Commodities:** Designed an interactive visualization platform with Folium, enhancing global commodity tracking efficiency for stakeholders. Recognized by multiple global teams, leading to a high-impact presentation opportunity to mitigating the supplier chain resilience

-**Chatbot Implementation:** Designed a chatbot system with Retrieval-Augmented Generation (RAG) for optimize information retrieval and user interaction.

-**SD&I Classification:** Conducted advanced segmentation analysis to uncover patterns in descriptive datasets, providing actionable insights.

These projects significantly enhanced my skills in AI, NLP, data visualization, and interactive system design.

PROJECTS

Vocalis: Intelligent Voice Assistant | *Python, Tkinter, OpenAI API, Streamlit, DALL-E, ChatGPT*

- Developed a voice assistant application integrating ChatGPT for natural language processing and DALL-E for AI-generated images, driving innovation in AI-driven solutions.
- Applied Python and Tkinter to design the core application, while using Streamlit for a cross-platform, responsive user interface.
- Collaborated in a team of 4 to deliver a robust product, demonstrating key skills in AI, machine learning, and user-centered design.

EcoGauge: Fuel Efficiency | *Python, Scikit-Learn, Matplotlib, Seaborn*

-Designed and implemented a predictive Machine Learning model to forecast vehicle fuel efficiency (miles per gallon) with high accuracy, leveraging features like engine size, horsepower, and vehicle weight.

- Leveraged state-of-the-art Machine Learning algorithms to develop a predictive model, enhancing decision-making in the automotive industry and promoting sustainability.
- Achieved an 85% prediction accuracy by optimizing the model with advanced hyperparameter tuning techniques, resulting in actionable insights for eco-conscious automotive designs.

FarmHelper | *Python, NLP, Machine Learning, Jupyter Notebook, Deep Learning* — *GitHub*

- Developed an intuitive ML/DL-based recommender system to guide users on crop selection, fertilizer recommendations, and crop disease diagnosis, enhancing agricultural decision-making.
- Engineered an innovative application that assesses environmental and soil data to provide tailored crop recommendations; increased farming productivity by 25% through optimized planting strategies based on local conditions.
- Demonstrated expertise in NLP and machine learning by independently building and deploying the system, delivering actionable, data-driven insights to support sustainable farming practices.

ACHIEVEMENTS

- **GeeksforGeeks Local Week Hackathon** – Secured 1st place, optimizing development processes with a focus on strategic planning and technical expertise.
- **Cisco Student Ambassador** (Jul 2023 – Jul 2024) – Promoted Cisco's technology through outreach and tech sessions, enhancing brand engagement and expanding technical knowledge across student communities.
- **SHE Hackathon** – Created actionable insights during participation in SHE Hackathon aimed explicitly at enhancing usability for over 100 potential end-users; recognized for outstanding contributions toward practical solutions benefiting local communities.
- **Event Head | Cisco VIT Bhopal Team** – Directed all aspects of event management for Cisco VIT Bhopal Team while identifying key areas to enhance team efficiency; findings revealed three major opportunities to improve future collaborative efforts.
- **Core Member | GeeksforGeeks Chapter** – Drove chapter activities, enhancing the learning experience by delivering structured tech workshops and interactive sessions, fostering a collaborative environment.
- **AdVITya Basketball Event** (Feb) – Secured *first place* in this intra-university event, demonstrating teamwork and resilience.
- **FLUXUS Inter-University Festival** (IIT Indore, Mar 10) – Participated actively, building networks and contributing to the cultural.
